

Cocos Island / Wind Dancer

UNESCO World Heritage Site

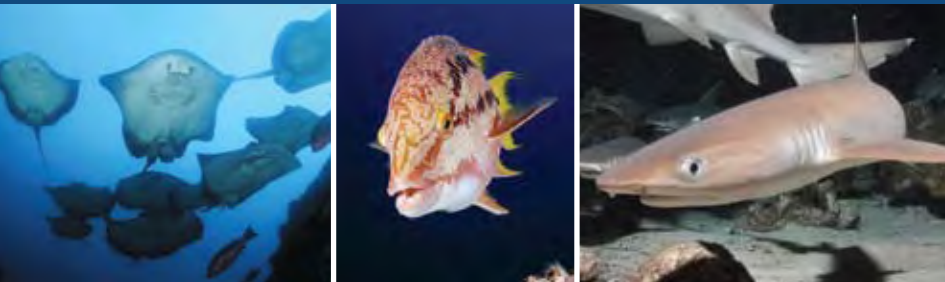

Made famous as the filming location for the dinosaur thriller "Jurassic Park," Cocos Island is one of our newest and most exciting dive destinations. Join us on a 300-mile voyage to one of the natural wonders of the world. Declared a Costa Rican National Park in 1978 and a UNESCO World Heritage Site in 2002, Cocos Island is home to the largest, most consistently reported schools of hammerhead sharks in the world.

Cruise in LiveAboard Excellence comfort on the *Wind Dancer* as you explore the waters of Cocos Island National Park. Exclusively limited to a very few divers at a time, this coveted drift-diving destination offers unparalleled concentrations of large marine animal encounters in nutrient rich waters. The convergence of multiple ocean currents brings in massive schools of hammerheads, jacks and tuna. Passing dolphins, whale sharks, manta rays and sailfish are also frequently sighted, along with octopus, moray eels, sea turtles and Creole wrasse.

Don't miss this incredible LiveAboard diving adventure aboard the *Wind Dancer*. Newly constructed master suites are available to complement the accommodations offered for a maximum capacity of 22 passengers. During the journey, guests are treated to a visual feast both above and below the water while being pampered onboard with air-conditioned, well-appointed staterooms, chef-prepared culinary delights, and first class personal service.
